Aarhus GeoSoftware takes over sales and support of Geotomo software

We are happy to let you know that from the 1st of April 2018, Aarhus GeoSoftware (AGS) will take over sales and support of Res2DInv and Res3DInv from Geotomo Software. The background for the collaboration is that Dr. Loke has a wish to focus his effort on development. AGS and Geotomo will work closely together and the development of the well-known programs res2dinv and res3dinv will be continued by Dr. M.H. Loke.

What are the future for Geotomo software?

The Geotomo software will continue to work in the well know rock solid fashion. We will for now consider all inputs and requests from users and we will later start on making a new visual design for the software with more tool and features.

For Aarhus Workbench we will now start making implementation for Res2DInv and Res3DInv in our Essentials module. This will give further possibilities to run Geotomo software and visualize results from within Workbench.

If you have any questions or requests, please contact us.

Conferences

Aarhus GeoSoftware will be represented at:

AEM2018 / 7th International Workshop on Airborne Electromagnetics

Airborne EM workshop – Denmark, June
EAGE Near Surface, Porto, September
IP workshop – Rutgers University, October
